

A SAFE APPROACH TO **PROFESSIONAL CUTICLE WORK**

0.5 Credit Toward Upgrading

Learn the rights and wrongs of cuticle work.

We all know a Nail Technician cannot legally perform a nail service that includes infection, inflammation, injury or invasion of the tissue The Eponychium is a very important guardian seal preventing germs and bacteria from getting into the matrix, it is very important to NOT dig underneath the nail fold, ever cut your client or skip disinfecting your tools properly. Sometimes we just cannot master meticulous prep work - the perfect base for a nail application. With all the new trends and techniques for nail applications, first comes the tools and prep work. Master safe professional cuticle work, the right base for the service with safe practices significant in preparing a successful safe nail application, within your scope of practice. Understand the does and don'ts of using cuticle pushers, nippers, e-file bits and make working safely on clients, including the elderly and diabetics, your priority!
